CERAMIC
WITH POLYSILAZANE TECHNOLOGY

THE ULTIMATE PAINT & INTERIOR PROTECTION FOR YOUR VEHICLE.

Ceramic Paint Protection

Introducing Supagard's latest high technology paint protection system. Our Ceramic with Polysilazane Technology is one of the most resilient surface treatments available, proven to be far more durable than traditional Ceramic and Quartz coatings. The tough, high gloss barrier bonds to the paintwork, sealing the surface against harmful UV rays, acid rain, bird lime, and atmospheric pollution.

Once professionally applied by trained technicians, the unique properties of our Polysilazane protection allows it to replicate the paintwork surface. This enhances your car with a high gloss finish but also protects a matte painted car without creating a shine. Once Polysilazane is applied there is no need for any monthly top ups or conservers, this makes maintaining your cars appearance so much easier.

PROTECTED AGAINST

BIRD LIME

UV RAYS

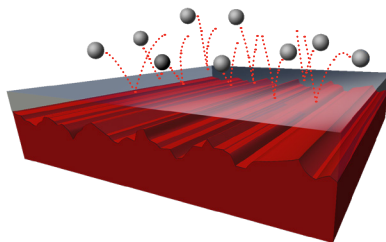

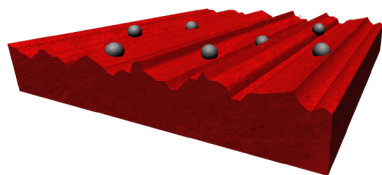

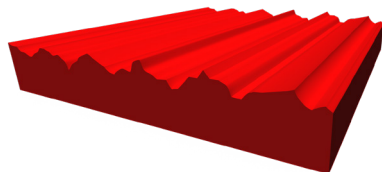

ACID RAIN

MUD & DIRT

ROAD SALT

UNPROTECTED CAR PAINT

If left unprotected, deterioration begins from day one. Pollution, acid rain and UV rays will begin to oxidise the paint.

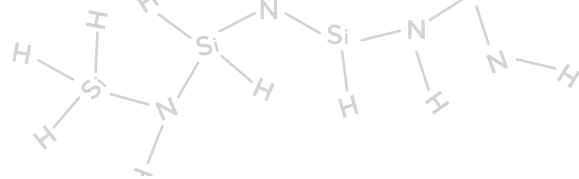

UNPROTECTED AFTER 1 YEAR

The paint has started to oxidise and the grime in the low points can only be cleaned with a cutting polish which removes a layer of paint.

PROTECTED WITH SUPAGARD

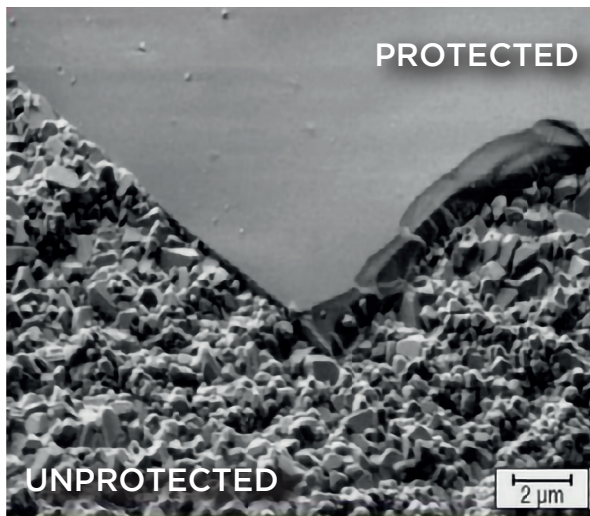

The paint, once treated, is protected by a durable barrier. This helps maintain the high gloss shine and protects against contaminants.

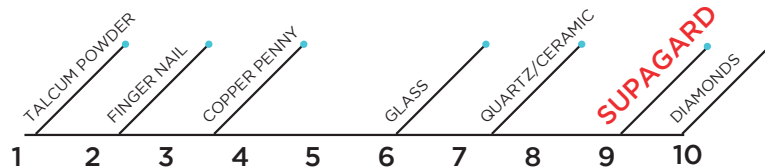

What is Polysilazane?

Polysilazane coatings originated from the marine industry and our chemists have reformulated the resin into a coating designed for paintwork and plastics. This form of protection can be used on textured as well as matte paintworks. It will replicate the surface that it is chemically attached to, leaving either a glossy or matte finish.

This is polysilazane under a microscope as it forms this impenetrable barrier.

MOHS SCALE

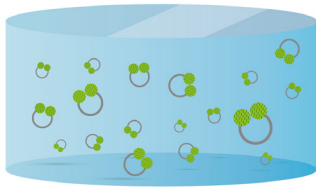

A total of five polymers make our Polysilazane. Together, these make for one of the hardest substances on the planet. Using the 'MOHS Scale' we can see our Polysilazane sits at 9, right behind diamonds. It's pretty tough stuff!

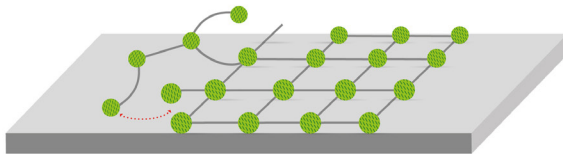

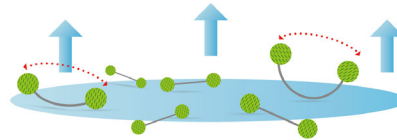

How does it work?

The science starts as soon as the treatment is applied, the surfaces are protected by an invisible durable barrier. This will maintain the high gloss shine and protects against the harshest contaminants your journey has to throw at you.

Held in amonia, the polysilazane is held together.

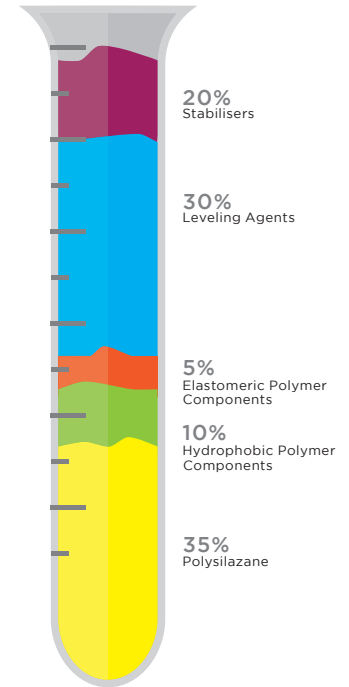

Once applied to the surface, the amino molecules spring open.

Paintwork Surface

They are attracted to other amino molecules and form a tough net over the treated surface.

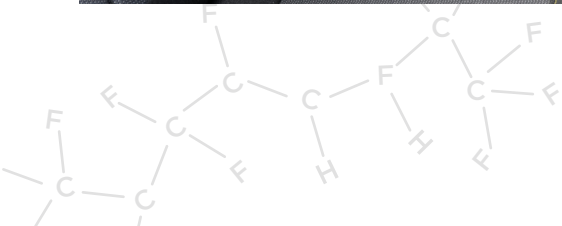

5 POLYMERS

Fabric Protection

Trained technicians coat each fibre of the fabric seats and carpets with a resin based formula which eases the removal of dirt and spills. This invisible barrier creates a stain resistant coating that helps prevent spoiling the new look and feel of your cars seats and carpets. Unprotected seats can lead to permanent damage by those little accidents

PROTECTED AGAINST

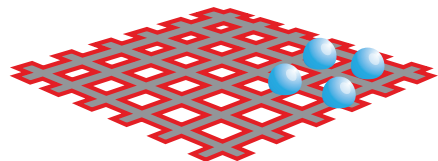

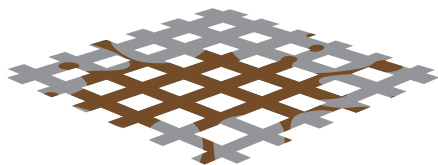

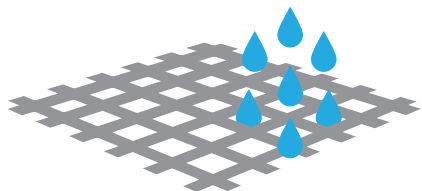

DRINKS SPILLS

DIRT & GRIME

MUCKY PETS

UNPROTECTED FABRIC

Liquid and dirt is free to penetrate the fibres of untreated seats.

STAINED FABRIC

These fibres have been stained by a coffee spill. Often, stains are rubbed while trying to remove them, making them worse and ingrained to the fabric.

PROTECTED FABRIC

Liquids and dirt can't penetrate the fabric once coated with Supagard's Bionic Fabric Protector. Therefore it may pass between or rest above fibres but won't affect them.

Leather Protection

(Optional Extra)

For vehicles with a leather interior, Supagard's Bionic Leather Preserver seals and protects. Treats the surface to guard against oil and water based staining and dye transfer from clothing, without damaging the leather's supple and lustrous feel.

PROTECTED AGAINST

DRINK SPILLS

DENIM DYE

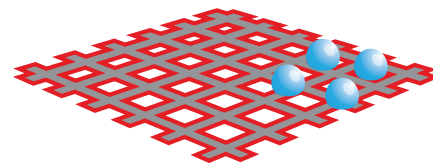

MUD & DIRT

MUCKY PETS

PROTECTED LEATHER

Liquids and dirt can't penetrate the leather once coated with Bionic Leather Preserver.

Aftercare

Our comprehensive Supagard aftercare range has been specifically designed to give you all the car cleaning and detailing products you'll require to keep your car in pristine condition. You can wash and clean your car as often as required, safe in the knowledge that Supagard aftercare products are fully compatible with our paint and interior protection systems.

Sustainability

In the UK alone we use 14 billion plastic bottles each year. 8.3 billion are sent for recycling. That means 59% of these bottles are recycled.

41% is the total percentage of bottles sent to landfill.

To help make a difference to our planet each of our bags is made from 33 recycled plastic bottles for the Aftercare Pack.

HOW IT'S MADE.

To create our bags we have a 12 stage process. From entering the recycling centre, the plastic bottles are sorted, shredded and washed all before being melted and turned into string. The fibre string is then spun into yarn to create the polyester material that you can find on your bag. Sounds simple, right?

We feel that this complex manufacturing process is the way forward for helping save our planet and becoming as sustainable as possible for our future generations.

DID YOU KNOW?

It takes 450 years for plastic to decompose. This has an environmental impact on at least 14 generations to come.

Recycling Process

Peace of Mind

Supagard professionally applied paint and interior protection products are guaranteed, subject to guarantee conditions.
