WELCOME TO SUPAGARD

As the UK's leading provider of paint and interior protection products, we continually strive to offer innovative products and marketing offers to our dealer and manufacturer partners.

As a family owned business, we are very proud of what we stand for. We are also very proud of our 35 year history and our exciting future. Many of our team members have been with the company for over 20 years, this provides invaluable experience which enables Supagard to deliver excellent customer service and a personal touch to our customers. It is more than just selling a product; it's about providing treatments for our customers' vehicles which enhance their lifestyle by making them easier to clean and visually maintain.

Our product developments continue to keep us at the forefront of our industry. We're committed to a research & development programme, which ensures that we only offer market leading technology that is proven to make a demonstrable difference. The need to consider our environmental impact has played a major part in our product development in recent years, this has resulted in a significant reduction in unnecessary packaging to reduce waste.

We know that your chosen partner for paint and interior protection is just a part of your wider business. However, we aim to be with you every step of the way and I can say with confidence that you are in safe hands with our team.

David Paterson
Managing Director
Supagard Ltd

TECHNICAL INTRODUCTION

Supagard was the first company in the UK to introduce Paint and Fabric protection for cars. Over the last three decades we have created industry leading technology to ensure that all our customers benefit from the state of the art chemistry.

There are many forms of paint protection technologies, here at Supagard we focus on three variants. Polymer, Polysiloxanes and Polysilazane are the molecular structures that allow our customers to choose the best protection suitable for their vehicles. Each Technology has different features so whether it is a smooth glossy finish, a chemical resistance, a hardness 9h finish or something that can be applied to plastic and matt finish, Supagard caters for everything.

When it comes to Fabric protection, this category is divided again into numerous substrates. These would range from a standard polyester fabric seat right through to Leather, Leatherette, Alcantara and numerous nylon materials. We are proud to have introduced a fast drying C6 Fluorocarbon that's has changed the industry with a 90 second touch dry solution. Our emulsified Leather protector has ground breaking additives to keep the leather soft and supple.

2023 will see the introduction of our new sustainability pledge which has saw the launch of our new 40% recycled plastic bottles as well as all our customer handover kits which will be fully manufactured from recycled materials.

Craig Hepworth
National Sales Manager
Supagard Ltd

SALES INTRODUCTION

After 40 years involved in the automotive industry, I am delighted to be part of the Supagard Team and to be working with a business that puts the customer first in everything we do.

There are a broad range of paint and interior protection suppliers operating within the UK, all of which supply products that do protect the paintwork and interior fabric of cars; however, Supagard Bionic treatments provide a level of protection that is superior to the competition and the Supagard Lifetime Guarantee is a another differentiating factor.

The Supagard Guarantee offers extensive paint protection and interior protection cover for both fabric or leather, with multiple claims allowed and a claims limit of £5,000.00. There is no requirement for any dealer involvement, the customer simply needs to contact the Supagard Support Team and we will take care of the rest. Secondly, there is no need for the customer to visit your dealership for an annual inspection to validate their guarantee on an ongoing basis. You simply apply the product and the customer is covered by our guarantee without the need for any conservers or top ups to maintain the protection offered by the guarantee, unlike many of our competitors.

Another factor to consider is our customer service, to both you the dealer and your customers, which as a 5 Star Trustpilot business Supagard know we can meet your requirements in every respect.

TECHNOLOGY**

POLYMER

THE SCIENCE

PAINT SEALANT

The most popular one is our single stage Polymer sealant, this is made up of calcium carbonates, hydrophobic polymers and a unique elastomeric polymer that fuses and bonds to the paintwork. This application is the most favoured throughout the industry.

THE PRODUCT

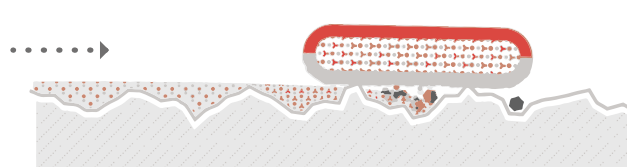

THE SCIENCE

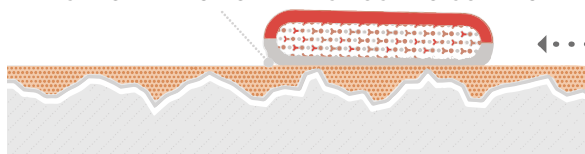

INGREDIENTS

Calcium Carbonates
High Active Polymer
Elastomeric Polymers

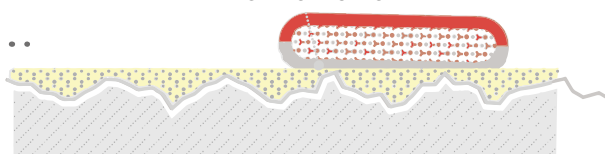

CALCIUM CARBONATES REMOVE IMPERFECTIONS

ELASTOMETRIC POLYMERS FUSE TO SURFACE

HYDROPHOBIC POLYMER

- SINGLE STAGE APPLICATION
- APPLICATION BY HAND
- CORE INGREDIENTS
- NO MAINTENANCE
- LIFETIME GUARANTEE

POLYSILAZANE

THE SCIENCE

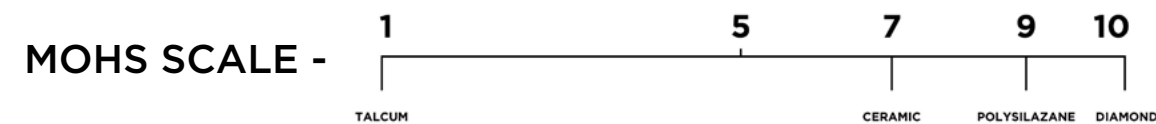

PAINT SEALANT - OPTION 2

Our second form of protection comes in the form of a Polysilazane coating. This originated from the marine industry and our chemists have reformulated the resin into a coating designed for paintwork and plastics. This form of protection can be used on textured as well as matt paintworks. It will replicate the surface that is chemically attached to leaving it with a gloss or matt finish.

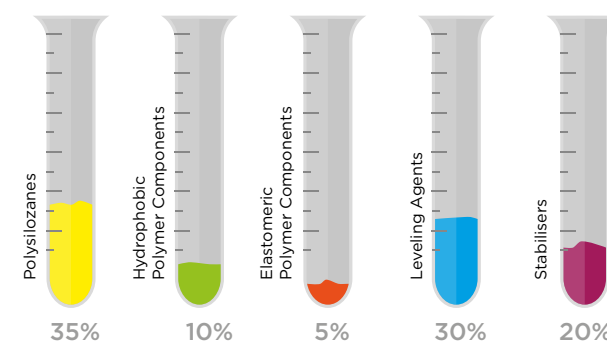

THE PRODUCT

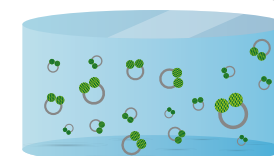

THE SCIENCE

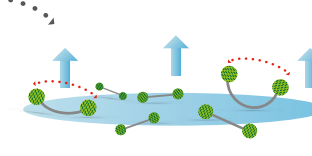

5 Polymers Make Our Polysilazane

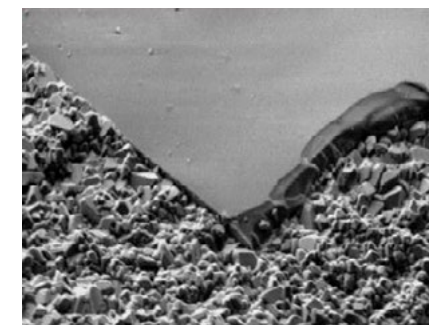

Held in ammonia, the polysilazane is held together.

Once applied to the surface, the amino molecules spring open.

They are attracted to other amino molecules and form a tough net. This is polysilazane under a microscope as it forms this impenetrable barrier.

Paintwork Surface

- 2 STAGE APPLICATION
- APPLICATION BY HAND
- HIGH ACTIVE INGREDIENTS
- NO MAINTENANCE
- LIFETIME GUARANTEE

FABRIC PROTECTION

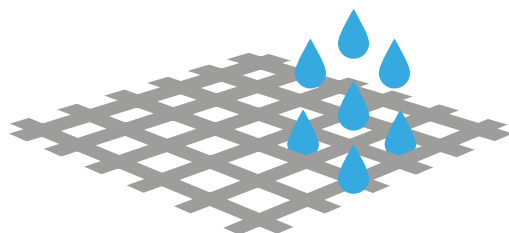

FABRIC PROTECTION

Recognising the need for application efficiency, we have recently launched a quick drying fabric protection system. With conventional fabric protection systems, the drying process can take approximately 3 hours (subject to room temperature). Our new resin based product is touch dry within 90 seconds and completely dry within 5 minutes.

THE PRODUCT

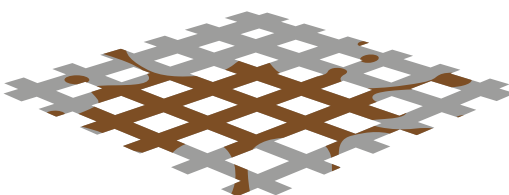

THE SCIENCE

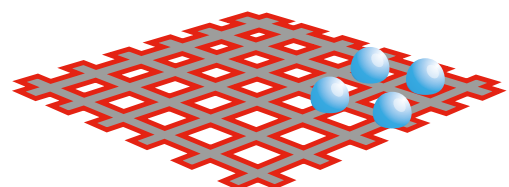

UNPROTECTED FABRIC

Liquid and dirt is free to penetrate the fibres of untreated seats.

STAINED FABRIC

These fibres have been stained by a coffee spill. Often, stains are rubbed while trying to remove them, making them worse and ingrained to the fabric.

PROTECTED FABRIC

Liquids and dirt can't penetrate the fabric once coated with our Fabric Protector. Therefore it may pass between or rest above fibres but won't affect them.

- SINGLE STAGE APPLICATION
- SPRAY ON APPLICATION
- HIGH ACTIVE INGREDIENTS
- NO MAINTENANCE
- LIFETIME GUARANTEE

LEATHER PROTECTION

LEATHER PROTECTION

A technically advanced C6 fluorocarbon that puts an invisible coating across all leather and man made materials. This barrier will help prevent any permanent staining as a result of spills or dye transfer or dirt and grime.

THE PRODUCT

THE SCIENCE

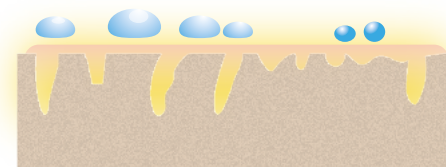

UNPROTECTED LEATHER

Liquid and dirt is free to penetrate the fibres of untreated seats.

STAINED LEATHER

These fibres have been stained by a coffee spill. Often, stains are rubbed while trying to remove them, making them worse and ingrained to the leather.

PROTECTED LEATHER

Liquids and dirt can't penetrate the leather once coated with our Leather Protector. Therefore it may pass between or rest above fibres but won't affect them.

SUSTAINABILITY JOURNEY

Supagard celebrated our 35th Birthday by collectively deciding to change our entire bottle range from Black to Silver. This introduced the launch of our new UK made 40% recycled plastic bottles.

In addition, our customer handover bag will be totally manufactured from recycled plastic bottles. Supagard aim to convert 10 million recycled bottles over the next five years.

Plastic Bottles can take 450 years to decompose in landfill. 450 years equates to 14 generations before the plastic decomposes.

At Supagard we want to support future generations. We are on the journey to converting all of our customer handover kits to be made from recycled plastic bottles.

SUSTAINABILITY JOURNEY

All of our Supagard branded customer handover bags will be be manufactured from recycled plastic bottles. This will be displayed to the customer on a small tab.

RECYCLING PROCESS

Sustainability starts with a twelve stage process.

STAGE 1.
Recycling centre.

STAGE 3.
Shredding.

STAGE 2.
Sorting of bottles clear and coloured.

STAGE 4.
Through a bathing process which separates colours.

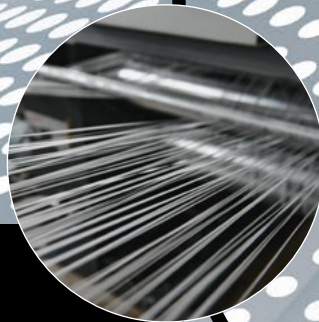

STAGE 5.
Concentrated bathing process which removes all stickers off bottles.

STAGE 6.
Placed in warm ovens to dry out the plastic in rotating drums.

STAGE 7.
Heated process that melts the plastic into long strings.

STAGE 11.
Material sent to our bag manufacturer.

STAGE 12.
Cut the shapes out of pockets and bag.

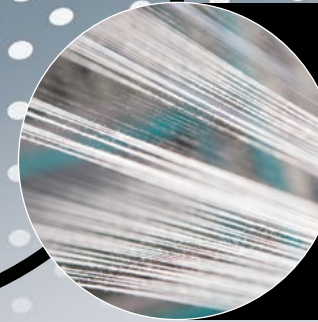

STAGE 10.
Thread is then used to yarn together and manufacture the polyester material.

STAGE 9.
Shred all the fibres together which creates thread.

STAGE 8.
The string is now combined together, stretched then heated to bond all the fibres together.

MARKETING COLLATERAL

Supagard have been at the forefront of paint protection since 1988, not only for the quality and efficacy of the product, but also for the continuous of premium marketing and point of sale materials.

Supagard’s traditional dip cards are still popular with customers and retailers today, along with new boot concepts and the new Bionic branding on brochures and animations. The Supagard branding is designed to reflect a crisp, clean, technical but customer friendly tone.

Personalisation is available on all marketing collateral.

SUPAGARD OEM PARTNERS

In addition to the in-dealer training provided by the Field Team, Supagard have recognised and identified the need to adapt to the needs of our dealer partners both as a result of Covid-19 and the time precious environment that the industry operates in. To meet these requirements, we have developed a Virtual Training Module that is delivered effectively using Microsoft Teams technology which covers both Product Knowledge and Sales Techniques.

RETAILER SUPPORT

- Application Training Videos
- Valet Bay Application Posters
- Virtual Sales Training on product knowledge and sales techniques
- Key Contact Information for Supagard Field Team
- Initial Retailer site visits to be completed in advance of contract launch
- On-site Sales Training
- On-site Application Training
- Virtual Guarantee Registration Process Training for Sales Administration Teams
